

Campion ensure water quality is up to five-star standards at Powerscourt Hotel

SUMMARY

Long-term customer Powerscourt Hotel turned to Campion to help them achieve new efficiencies and improved water quality to provide their guests with the level of service they expect.

THE CHALLENGE

Campion have been working with Powerscourt Hotel since it's construction in 2010, having installed all the water services pumping equipment and providing ongoing service and maintenance. Through regular service and maintenance, the hotel became aware that the quality of water from their existing bore hole needed to be improved. They wanted better control over their water quality and to raise standards in line with their five-star reputation.

KEY FACTS

Service & Maintenance**

POWERSCOURT
HOTEL RESORT SPA

Powerscourt Hotel is a luxury five-star hotel set amidst one of the most scenic and historic estates in the country. A 194-room resort offering guests a host of amenities.

KEY DATA POINTS

PROVIDING

56 million litres
of safe, clean water annually

THE SOLUTION

The existing bore hole was reaching it's end and no longer suitable for the hotel's needs. Champion engineers surveyed the area and identified a new water source. A new bore hole was drilled, and a complete chemical dosing system was fitted to control the chlorination, turbidity and pH levels of the water. Champion Connect was installed to closely monitor the pumping and treatment system, detecting any changes in the water quality or faults that may occur with the pumping station and alerting the hotel's staff to investigate.

THE OUTCOME

With approximately a half days reservoir of water at the hotel site, the new system of chemical dosing and Champion Connect monitoring has provided the peace of mind needed to ensure high quality water is always available for the hotel's guests.
